

ACTIVITY 1 - VARIABLES AND DATA TYPES

js-activity-2

Activity 1 - Variables and Data Types

Task 1:

Declare and Assign Values to [Variables](#)

1. Declare a variable called **name** and assign your name as a string to it
2. Declare a variable called **age** and assign your age as a number to it
3. Declare a variable called **isStudent** and assign a boolean value to it

Task 2

Perform Basic Calculations

1. Declare a variable called **birthYear** and calculate your birth year based on your current age

```
const currentYear = 2023;
```

```
const birthYear = YOUR_BIRTH_YEAR - YOUR_AGE;
```

Replace the **YOUR_BIRTH_YEAR** and **YOUR_AGE**

Task 3

Reassign and Update [Variables](#)

1. Reassign the **age** variable to a new value (e.g., increase your age by 2).

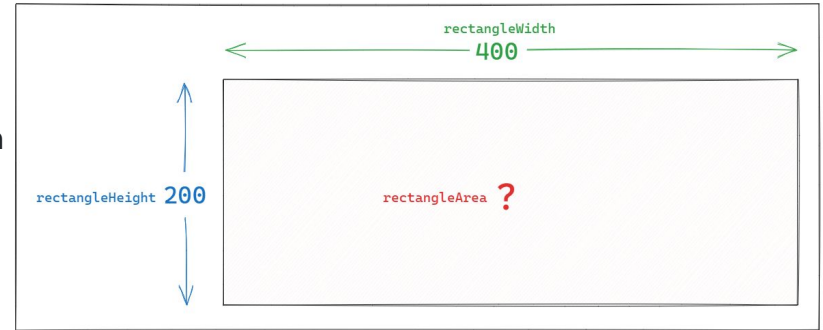

Activity 1 - Variables and Data Types

Task 4:

Declare and Assign Values to **Variables**

1. Declare a variable called **rectangleWidth** and assign width to it
2. Declare a variable called **rectangleHeight** and assign height to it
3. Calculate the area of the rectangle using this formula $\text{area} = \text{width} * \text{height}$ and assign it to **rectangleArea** variable
4. Use **console.log()** to display the calculated area

Activity 1 - Variables and Data Types

Task 5:

Declare and Assign Values to Variables

1. Declare a variable called `triangleBase` and assign width to it
2. Declare a variable called `triangleHeight` and assign height to it
3. Calculate the area of the rectangle using this formula $\text{area} = (\text{base} * \text{height}) / 2$ and assign it to `triangleArea` variable
4. Use `console.log()` to display the calculated area
