

ACTIVITY 6 - DOM MANIPULATION

branch name: js-activity-6

ACTIVITY 6 PART 1 - DOM MANIPULATION

Instruction

Using HTML + CSS, create six boxes following this layout:

RED	ORANGE	YELLOW
GREEN	VIOLET	BLUE

Using JS, add an [event listener](#) to each box such that when the box is clicked, the box's background [color](#) will change to the box's text:

RED	ORANGE	YELLOW
GREEN	VIOLET	BLUE

ACTIVITY 6 PART 1 - DOM MANIPULATION

Then create another box which when clicked, will ask the user for a [color](#), and the user's answer will be that box's background [color](#):

RED	ORANGE	YELLOW
GREEN	VIOLET	BLUE
What color?		

Challenge!

By adding an additional condition in your [event listener](#), you can make it go back to white if the box is already colored:

RED	ORANGE	YELLOW
GREEN	VIOLET	BLUE

ACTIVITY 6 PART 2 - DOM MANIPULATION

Instruction

Create a simple registration form with 3 fields, asking for username, password, and password confirmation.

REGISTRATION PAGE

USERNAME:

PASSWORD:

CONFIRM PASSWORD:

REGISTER

When the register button is clicked, validate the input fields:

- all fields cannot be blank
- password and confirm password field values should match

REGISTRATION PAGE

USERNAME:

Please enter valid username / username cannot be blank

PASSWORD:

Please enter valid password / username cannot be blank

CONFIRM PASSWORD:

Please enter valid password / username cannot be blank

REGISTER

ACTIVITY 6 PART 2 - DOM MANIPULATION

Provide a sample [array](#) of `already registered` usernames, e.g.

```
const users = [
  { username: "angelina_maldita" },
  { username: "juandelacruz" },
];
```

such that when the user tries to register with any of the names in the list, they should get an error message:

REGISTRATION PAGE

USERNAME:

Username is taken

PASSWORD:

CONFIRM PASSWORD:

REGISTER

If all inputs are valid, remove error messages and send an alert message notifying the user of successful registration.
